

Tonda Gentile ROMANA

GROWTH DESCRIPTION

Tree vigour - Low [3]

Tree growth habit - Semi erect [3]

Branching density - Sparse [3]

Suckering - Medium [5]

BUD DESCRIPTION

Bud color - #

Bud shape - #

LEAF DESCRIPTORS

Leaf blade shape - #

SHOOT DESCRIPTORS

One-year-old-shoot thickness - Thick [7]

One-year-old-shoot hairiness - #

One-year-old-shoot density of lenticers - #

INFLORESCENCE

Stigma colour of young flowers - #

NUT AND KERNEL

Involucre construction - #

Involucre length compared to nut length - #

Involucre indentation - #

Serration of indentations on the involucre - #

Involucre thickness at base of involucre - #

Involucre hairiness density - #

Jointing of bracts on involucre - #

Predominant nut number per cluster - Two to three

Nut shape - Globular [*2]

Nut-shape of cross section - #

Nut schell colour - Brown

Shell stiping - Medium [5]

Shape of nut apex - Obtuse

Nut apex prominence - Stong [7]

Size of pistil scar - Medium [5]

Hairiness of nut apex - #

Size of nut basal scar in relation to nut size - #

Curvature of nut basal scar - Plane

Kernel shape - Globular

Kernel plumpness - #

Kernel fibre texture - Lightly corky [3]

Kernel blanching (Ease of pellicle removal) using 115°C for 20 minutes - Poor [3]

Size of internal cavity of kernel - #

Blooming reference standard - #

Dichogamy - Protogynous [7]

Nut falling - #

Plant Description

Necessity of vegetative gems (based on Mehlenbacher, 1991. Number of temperatures below 7 ° C)
